

Yukon Conservation Data Centre Animal track list

Updated February 2019

This is a list of animals that are considered of conservation concern in Yukon by the Yukon Conservation Data Centre. Although we actively track information on all of these species, we only map known locations for some of them in our database.

The “Sightings to Report” and “Range” columns indicate which sightings we would like to receive. We have developed field observation forms (available for download on our website) to assist with this reporting. Please submit all bird observations to eBird.org.
